QUALITY DESCRIPTION

CHARACTERISTICS	VISUAL QUALITY	INDUSTRY QUALITY
General	Optimised for a visible use, e.g. as visible rafters and beams for carports and upscale residential areas. All knots are sound knots and knotholes are patched. The occurrence of blue stains, red stripes and/or pitch pockets is minimised. The cracks are minimised and hardly any heart centre is present due to core-free cutting. A homogeneous appearance is aspired.	Optimised for a nonvisual use. Discolorations such as blue stain, nail-proof brown and/or red stripes are permitted. Fallen-out knots and pitch pockets may casually occur. For loadbearing and non-loadbearing use in engineered timber structures with lower aesthetic requirements.
Black knots	Permitted, provided that they do not fall out	Permitted
Falling knots	Permitted up to approximately 20 mm, sound knots are permitted	Permitted
Wane	Not permitted	Not permitted
Rotten areas	Not permitted	Not permitted
Pith	Permitted	Permitted
Pitch pockets	Permitted up to approximately 5 x 50 mm, larger pockets must be patched	Permitted
Insect infestations	Not permitted	Permitted up to a diameter of 2 mm
Red stripes	Up to approximately 5% of the surface	Permitted
Blue stain	Up to approximately 5% of the surface	Permitted
Planing quality	Rough areas are not permitted. Planer marks up to a length of 10 mm and a depth of 1 mm are permitted	Rough areas and planer marks are permitted
Cracks	Permitted up to a depth of 1/6 of the component width (per side); as long as the required static loadbearing capacity is not impaired	Permitted up to a depth of 1/6 of the component width (per side); as long as the required static loadbearing capacity is not impaired
Scope of validity	The specified surface qualities are valid at time of delivery.
